

To whom it may concern,

The Sydney Olympic Park Aquatic and Athletic Centres provides training, competition and leisure facilities for elite athletes and the general community. This world-class facility includes six swimming pools, water slide, spas, sauna and many water features. The surrounding green areas of the Centre are unique due to the abundance of trees, scrubs and turf supported by sophisticated security systems.

The venue was utilized for a variety of Aquatic events such as swimming, water polo, diving and synchronised swimming during the 2000 Olympic and Paralympic Games.

The Centre has an extensive environmental and energy conservation plan that includes the continually assessing of new sustainable energy products.

As part of the plan, one product recently installed at the Centres was the Xlerator Fast Hand Dryer. The hand dryer was originally installed as a trial only but due to the positive comments by customers and patrons combined with the dependable, cost effective and environmentally friendly units, the Centre is planning to purchase an additional 50 dryers to replace the existing units.

Excel Dryer Inc has an extensive and comprehensive Environmental and OH&S procedures ensuring that the company's products are well supported by proper work practices and service department.

I can be contacted on 0417 491 320 to clarify any of the above.

Yours faithfully,

Ian Kennedy
